Education

New York University, B.A. Computer Science

Jan 2022

Work Experience

American Express

Engineer II

Feb 2022 – present

- Led implementation of configurable lightning web component designed to consolidate phone and email marketing preference management, support privacy compliance, and reduce overhead processes for **800+** sales and account development users.
- Contributed to the development of scalable real-time notification framework that consolidates alerts across the salesforce platform, enabling account development users to prioritize their outreach. Projected to generate **\$5.6MM** in revenue.
- Incorporated Round Robin scheduling in internal meeting application to assist in equitable distribution of prospects and customers across pool of sales colleagues.
- Maintain technical documentation for incoming engineers and internal teams to enhance the onboarding experience and streamline feature development.

Software Engineer Intern

Jun 2021 – Aug 2021

- Assessed the potential of using Infrastructure as Code (IaC) solutions to automate the CI/CD process for developers.
- Developed terraform and crossplane providers using Go to demonstrate their capabilities in significantly reducing deployment time.

PagerDuty, Software Engineer Intern

Jan 2021 – Apr 2021

- Generated terraform modules to automate the provisioning of AWS resources (e.g., S3, RDS, ElastiCache, Elasticsearch) for several microservices in EU data centers.
- Increased team visibility on API usage and bugs by expanding logging and metrics monitoring using Sumo Logic and Datadog.
- Created the UI for new anomaly detection feature that will help customers better triage and respond to incidents.

Projects

Incident Response System, Next.js, NextAuth.js, React, Tailwind CSS

- Engineered dashboard UI that will help event staff of **500+** person convention manage and respond to incidents.
- Leveraged NextAuth for secure token-based authentication and the Tailwind framework for rapid UI development.

food with friends [🔗](#), MongoDB, Express, React, Node.js

- Collaborated on a web app that helps users find suitable restaurants based on dietary preferences.
- Built with the MERN stack, the app enables group members to spend more time together by streamlining the process of selecting a restaurant that meets their diverse needs.

flixbbox [🔗](#), Node.js, Express, HTML/CSS, Handlebars

- Engineered a web app that simplifies choosing a movie to watch with family and friends, making movie nights more enjoyable and hassle-free.
- Integrates with TMDB API to provide users with movie data to make informed decisions.

utrend [🔗](#), Swift, Firebase

- Spearheaded the design of iOS app that enables users to create and share outfits with others.
- Built with Swift, the app promotes sustainability and encourages users to be creative with their wardrobe.
